

Real-time Communications and Connectivity When Every Second Counts

- » Increase Resident Satisfaction with a Quiet, more Peaceful Environment
- » Enhance Staff Mobility and Efficiencies via Access to Real-Time Information
- » Establish Higher Levels of Resident Safety
- » Reduce Critical Event Response Times from Multiple Minutes to Split Seconds
- » Integrate Current and Legacy Systems to Automate Alarm Conditions

Commtech Solutions for Senior Care Facilities

Commtech has provided mission-critical, discreet communication solutions for many Senior Care facilities across North America. The ability for residents and staff to communicate requests and critical events in real-time within a facility is of the utmost importance. Staff-to-staff, resident-to-staff and various enterprise system communication requirements often create inefficient workflow patterns, requiring a streamlined approach to ensure resident satisfaction, safety indicators and quality goals are met. Lack of integrated and efficient communication typically results in major gaps in the flow of critical information. Commtech's portfolio of solutions provides unobtrusive and subtle communication to provide a more relaxed, homelike environment. In addition to enabling operators with the ability to easily contact highly mobile staff, virtually any system can be enabled to intelligently deliver critical information to a mobile workforce and create a more informed, efficient, and safe environment.

Mission-Critical, Discrete Communications

Effective communications is the building block of providing quality care and enhancing operational efficiencies in a health care environment. When split seconds can impact life threatening situations, there is no margin for error and every moment counts. Senior care facilities rely on their communication technologies and workflow processes to deliver critical information to a highly mobile staff in order to react quickly and effectively to critical patient scenarios. Reducing noise pollution in a Senior Care environment, particularly when minimizing or eliminating chaotic overhead speaker usage, creates a quieter and more comfortable environment for residents and their visiting family and friends. Commtech Wireless is uniquely positioned to enhance the effectiveness of distributing real-time information, and can also offer a comprehensive yet economical, end-to-end solution in deploying private paging networks and pagers.

Systems Interoperability

Virtually all enterprise systems can be seamlessly integrated to deliver descriptive alarm conditions to staff recipients and groups. Emergency call and nurse call integration to wireless devices is often deployed to ensure rapid response to resident needs, and Commtech connects seamlessly with all commercially available systems. Interoperability is also available with other systems such as patient wandering, fall management, security, and fire alarms. Whether integrating a single application or several, Commtech enables a modular and scalable architecture that delivers a compelling total cost of ownership while reducing the complexity in deploying real-time communications and connectivity solutions.
